

CALHHS BEHAVIORAL HEALTH AND TASK FORCE MEETING

Meeting Summary

TUESDAY, SEPTEMBER 13, 2022, 10AM – 3PM

MEETING SUMMARY PURPOSE

This document provides a summary of the Behavioral Health Task Force (BHTF) quarterly meeting held on September 13, 2022. This summary is an accompaniment to the presentation slide deck and meeting recordings, both available for review on the [BHTF webpage](#) along with other meeting materials.

Appendix A of this summary contains notes from each breakout group discussion.

WELCOME & INTRODUCTIONS

WELCOME

Secretary Mark Ghaly, California Health and Human Services (CalHHS), welcomed BHTF members and members of the public. He expressed his appreciation for the perspectives and input that participants bring to the BHTF meetings. Secretary Ghaly said that the meeting would focus on crisis care, helping the State thoughtfully ground in the experiences of those who have been in crisis as it works to put in place the range of services those experiencing behavioral health crises need. He noted that the State's work on crisis care is one piece of a comprehensive set of efforts to advance equitable care for Californians experiencing a range of behavioral health challenges and needs.

Deputy Secretary of Behavioral Health Stephanie Welch, CalHHS, introduced Matias Eusterbrock, Program Analyst with the CalHHS Office of Policy and Strategic Planning, who is a new staff person supporting the BHTF.

As an introductory activity, participants were invited to respond to a poll asking whether they or a loved one has ever reached out for support from a suicide prevention hotline and whether they have ever provided support services on a crisis hotline. A quarter of participants responded that they or a loved one have reached out for support from a hotline and 30% have provided support services as a volunteer or staff on a crisis hotline.

LIVED EXPERIENCE PERSPECTIVES ON CRISIS PREVENTION AND RESPONSE

Dino Alzadon, Suicide Crisis Intervention Supervisor and Counselor; Miguel Serricchio, loss survivor and Peer Facilitator; and Shauna Toh, Crisis and Follow-Up Counselor, Didi Hirsch Mental Health Services, shared their perspectives based on lived experience of their own or a loved one's struggle with suicide.

CALHHS BEHAVIORAL HEALTH AND TASK FORCE MEETING**Meeting Summary**

TUESDAY, SEPTEMBER 13, 2022, 10AM – 3PM

BEHAVIORAL HEALTH CRISIS CARE CONTINUUM PLANNING UPDATE

Deputy Secretary Welch gave an overview and update of the State’s Crisis Care Continuum planning effort, as a follow-up to the presentation and discussion during the June 2022 BHTF meeting and the August BHTF Lunch and Learn in which she gave a longer update on the same subject. She recapped the anticipated components of the Crisis Care Continuum Plan and key themes from the feedback on crisis care gaps and opportunities that BHTF members provided during the June meeting. She outlined three preliminary takeaways from a review of the current state of crisis care in California and the opportunities for improvements related to each:

- There have been many local and state-wide efforts related to crisis care; however, there is room for improved coordination between crisis prevention, response, stabilization
- Across CA counties, there are different approaches to crisis prevention, stabilization, and response with considerable geographic variation in the availability of services, particularly county-run warmlines
- Focusing on 988, California appears to meet readiness standards within the Lifeline Network-affiliated contact centers; however, there may be opportunities to ensure coordination and readiness across the broader network of call lines

Deputy Secretary Welch outlined a synthesis of how the State’s crisis care systems align with national standards, with two key takeaways:

- Existing national guidance documents primarily focus on responding to and stabilizing crises; CA may consider prioritizing preventing crises in the context of ongoing public health initiatives in the area
- When compared to national guidance documents for responding to and stabilizing crises, CA meets expectations for hotlines; however, there are inconsistencies for other crisis services operated at the county-level

She then outlined a possible approach for future state minimum standards to address objectives related to prevention, response, and stabilization.

- Preventing Crisis
 - Access to peer-based warmlines
 - Access to community-based behavioral health services, such as:
 - Community-based social services
 - School-based and school-linked services
 - Primary care clinics and FQHCs

CALHHS BEHAVIORAL HEALTH AND TASK FORCE MEETING

Meeting Summary

TUESDAY, SEPTEMBER 13, 2022, 10AM – 3PM

- Outpatient BH care (e.g., CCBHCs, urgent care clinics, transition clinics, bridge clinics)
- Peer support
- Harm reduction
 - Exposure to digital apothecary (e.g., CYBHI digital platform, CalHOPE digital tool)
- Responding to Crisis
 - Real-time coordination of crisis and outgoing services
 - Linked, flexible services specific to crisis response
 - Triage/screening & initial assessment, including explicit screening for suicidality
 - Counseling throughout the encounter and intervene to de-escalate the crisis
 - Family and individual psycho-education
 - Exposure to peer support and family support
 - Coordination with medical and behavioral health services
 - Crisis planning and follow-up
- Stabilizing Crisis
 - Evaluation of needs and strengths
 - Continued monitoring of care
 - Crisis service discharge planning
 - Linkage to ongoing care

CRISIS CARE CONTINUUM PLANNING – SMALL GROUP DISCUSSIONS

Attendees participated in breakout discussions to inform the State's Crisis Care Continuum (CCC) Plan. Participants shared input on the standards of basic behavioral health crisis care services that the State should strive to ensure all Californians have access to. Each group's discussion focused on either crisis prevention, response, or stabilization. Groups participated in a structured conversation as follows:

1. **Future State Standards:** Groups reviewed previously identified future state standards (which were informed by input gathered at the June BHTF meeting) and did a quick brainstorm of any missing standards that should be added.
2. **Current State of Standards:** Groups assessed the availability of those standards, indicating if each was currently available, currently in planning (with a ~2-5 year timeframe to become available), or something to aim for in the future but not currently available or in planning.
3. **Needs:** Groups discussed what is needed to be able to achieve each standard.

CALHHS BEHAVIORAL HEALTH AND TASK FORCE MEETING

Meeting Summary

TUESDAY, SEPTEMBER 13, 2022, 10AM – 3PM

- 4. Additional Input or Considerations:** Groups were able to share any additional input about the standards (e.g., listing examples of related programs or noting if group members have differing perspectives on the standard) and identify any key considerations regarding the standards.

KEY THEMES FROM BREAKOUT DISCUSSIONS

Key themes from the breakout discussions and report outs are summarized below. See Appendix A for each group's completed notes template, where groups tracked their discussions.

STATEWIDE CONSISTENCY AND ACCESS

There was broad agreement around the need for statewide standards of behavioral health crisis care services. While there are some locally-defined service standards, members emphasized the importance of State leadership to ensure that services are consistently available and accessible across jurisdictions like school districts or counties.

A key issue related to statewide consistency of care is the need to standardize the service response across payers, so that individuals in crisis receive the care they need regardless of who is funding it. Participants emphasized that this is an issue that will require systematic coordination across services and payer groups. Ensuring that care is not based on payer is an important equity issue, as many disparities are based on economic resources and the channels through which people access care.

Groups emphasized that availability of services is not sufficient if those services are not accessible to those who need them. One group recommended tracking the availability, affordability, and accessibility of services over time, from both a quantitative and a qualitative perspective. Additionally, groups highlighted the need for a “no wrong door” approach to ensure that people in crisis are able to get connected to the services they need regardless of their entry point to the system. Participants noted that this will require strong connections across the system, with intensive training so that the people working in the system are aware of the no-wrong-door approach and know how to connect people to the services they need.

In addition, one group emphasized that meeting statewide standards and improving access will require appropriately resourcing the system. The group highlighted in particular the importance of sufficient funding and adequate compensation for the workforce, as well as the need to address workforce burnout.

CALHHS BEHAVIORAL HEALTH AND TASK FORCE MEETING

Meeting Summary

TUESDAY, SEPTEMBER 13, 2022, 10AM – 3PM

One group also said that improving coordination of medical and behavioral health care would support access to services. They discussed developing standards and reducing requirements for medical clearance and screenings to make the connections between medical and behavioral health care less traumatic and get clients where they need to be more seamlessly.

One group highlighted that the statewide standards should not remain static, but instead ongoing community engagement should be implemented to understand what is and is not working for community members and improve the system's responsiveness. One group noted that minimum standards and best practices are distinct, and both are needed.

EQUITY

Participants highlighted that equity is a key issue that future state standards should address, with the aspiration of addressing the overrepresentation of certain groups among those experiencing behavioral health crises. Suggestions included:

- Analysis of outcomes should address outcomes for underserved and overrepresented groups, not just overall average outcomes
- Ensure care is culturally affirming and linguistically appropriate
 - Invest in community-defined practices
 - Target workforce development and recruitment to mirror the client population – Black communities; bilingual and bicultural communities
 - The definition of “stabilization” and what is considered a successful outcome should recognize cultural contexts and non-clinical outcomes like self-determination, community integration, and employment
- Expand investment in equity projects, such as the California Reducing Disparities Project and the Perinatal Equity Initiative
- Address the negative consequences that can be associated with seeking and receiving behavioral health care (for example, employment and professional consequences or impacts on things like family court and security clearances)
 - Provide support such as financial support, child care, and paid medical leave that allows people to receive the services they need – “time and space to heal”
 - Leverage people with lived experience and design thinking to anticipate and mitigate these potential harms and improve the experience of the person seeking care in a crisis

CALHHS BEHAVIORAL HEALTH AND TASK FORCE MEETING

Meeting Summary

TUESDAY, SEPTEMBER 13, 2022, 10AM – 3PM

PREVENTION

Participants discussed the need to integrate upstream prevention, before reaching the point of crisis. Some groups discussed the importance of stigma reduction as a measure that can help prevent behavioral health crisis. They suggested bolstering school-based programs to address stigma among children. One group suggested integrating upstream prevention with those that are not yet involved in the behavioral health system in any way through avenues like Family Resource Centers. One group highlighted that screening is an important part of prevention. While there are many screening tools, the group said that a standard set of vetted screening tools was needed that was agreed upon for use across sectors. They recommended that the screening tools be free, open-source, and universal. A group also said that an aspirational goal would be to evaluate and measure the impact of stigma on behavioral health crises.

TRUSTED RESPONDERS AND APPROPRIATE CRISIS CARE SETTINGS

One group discussed the importance of ensuring that crisis responders are trusted community members, including peers. Law enforcement involvement in crisis response should be eliminated whenever possible. The group also discussed the importance of establishing alternatives to jail, juvenile hall, and even emergency room settings in order to provide appropriate crisis care.

NAVIGATION, EDUCATION, AND AWARENESS

Multiple groups discussed the need for navigation support and improved awareness to improve access. They discussed the need to educate and inform providers and the public in order to meet these minimum standards and improve care for people in experiencing behavioral health crises. Some examples include:

- Provide navigators to help clients understand the care available and access the care they need
- Educating providers, beneficiaries, and family members on available services
- Educating providers to better understand crises, for example distinguishing between mental health psychosis versus substance use-induced psychosis
- Competency training is needed related to intellectual and developmental disabilities to ensure appropriate access to care based on client need
- Increase community awareness of resources and reduce stigma through marketing campaigns

CALHHS BEHAVIORAL HEALTH AND TASK FORCE MEETING**Meeting Summary**

TUESDAY, SEPTEMBER 13, 2022, 10AM – 3PM

CONSIDERATIONS FOR SPECIAL POPULATIONS

Multiple groups addressed the need for special considerations regarding care for certain populations. The statewide standards should articulate standards of response for these different populations, including youth, older adults, and cultural and linguistic considerations.

DISCHARGE, FOLLOW UP, AND CONTINUED CARE

Multiple groups addressed the importance of thoughtful discharge, follow-up, and continued care. Suggestions and considerations include:

- Discharge planning should include a warm handoff, not just a list of resources
- Clearly identify who is responsible for follow-up and linking the client to services (e.g., provider that served the person while in crisis, insurer, primary care physician, other)
- Ensure that there are clear mechanisms to cover the work of follow up and linking to services under both Medi-Cal and private insurance
- One group highlighted that this is an equity issue: according to the AB 470 Performance Dashboard, 48 percent of African-Americans received no stepdown services in 2019-2020
- Training and workforce development will be critical to appropriate follow up care
- Clarify the linkages between discharge planning, follow up, and continued monitoring
- Follow up and discharge planning should consider not just the client, but also their family
 - Support the loved ones that will be accompanying and supporting the individual in crisis, for example with peer support and with support available in waiting areas
- As part of crisis follow up, establish psychiatric advanced directives for those that do not already have them
 - Name trusted people within psychiatric advanced directives
 - Connect psychiatric advanced directives to the crisis response system, so that the people answering calls and responding to crisis have access to that information

CALHHS BEHAVIORAL HEALTH AND TASK FORCE MEETING

Meeting Summary

TUESDAY, SEPTEMBER 13, 2022, 10AM – 3PM

PUBLIC COMMENT

Members of the public were invited to share brief comments up to two minutes each.

- Carmen Perez said that Los Angeles County is experiencing significant impacts related to lack of workforce to meet the needs, particularly in Latinx and Asian Pacific Islander communities. She noted that the Department of Mental Health is reducing its services for this reason. She said that the State should have a greater focus on creating a strategic workforce development plan, with attention to preventative care and equity.
- Beth Burt said she was from the Autism Society Inland Empire. She said that there are many cases in which mental health providers will not work with people with autism, leaving families without the crisis care they need and in cycles of violence.
- Lilyane Glamben said she was from On Track Program Resources. She said that there is need for expanded community-based funding opportunities, including targeted funding to serve the African American community, for prevention-focused services. Community organizations working in the prevention and early intervention space become trusted sources of support through being a first line of response, but also often serve people whose needs exceed prevention. She said that the California Reducing Disparities Project has been doing important work in this space, but more funding is needed.

UPDATE ON THE CHILDREN AND YOUTH BEHAVIORAL HEALTH INITIATIVE

Melissa Stafford Jones, director of the CalHHS Children and Youth Behavioral Health Initiative (CYBHI), gave an update on the CYBHI, an update on development of the outcomes goals for the CYBHI, and an overview of a CYBHI Ecosystem Working Paper. Ms. Stafford-Jones noted that the CYBHI is being undertaken as a core component of the state's Master Plan for Kids' Mental Health, in conjunction with a variety of related efforts and investments.

CYBHI UPDATE

Ms. Stafford Jones shared highlights of progress at the level of the CYBHI as a whole, as well as from individual workstreams. Key highlights of the overall CYBHI work since the last BHTF meeting in June 2022 include:

- Advance equity: Established Equity Working Group with 39 members; conducted first full group meeting August 17 (presentation materials)
- Center on children, youth, and families: Completed 37 focus groups with youth and caregivers¹, with support from 6 children, youth, and family engagement partners. An additional 7 focus groups and 20 interviews are planned.

CALHHS BEHAVIORAL HEALTH AND TASK FORCE MEETING

Meeting Summary

TUESDAY, SEPTEMBER 13, 2022, 10AM – 3PM

- Reimagine the ecosystem: Completed phase one research, including 100 subject matter expert interviews, to inform design of the future ecosystem
- Increase awareness: Published Back-to-School Mental Health Resources for youth, parents, families, and educators
- Embed accountability: Released Request for Proposal for CYBHI Evaluation Consulting Services, with the submission deadline on September 30, 2022 and contract award announcement planned in late October 2022

For more details, Ms. Stafford-Jones invited participants to view the CYBHI quarterly webinar update and other materials via the CYBHI webpage [here](#).

CYBHI OUTCOMES AND OUTCOMES MEASURES

Ms. Stafford Jones shared an update on the process of developing outcomes goals for the CYBHI. She shared background on the CYBHI approach to evaluation and the timeline for development of the outcomes goals. The outcomes were developed with input from youth, caregivers, educators, cross-sector partners, and subject matter experts; BHTF members were also consulted through breakout discussions during the June 2022 BHTF quarterly meeting. From these diverse perspectives, input was synthesized into the following cross-cutting themes:

Youth and family experiences with BH system	The need for the system to be more “welcoming,” “responsive,” “empathetic,” “accepting,” and “less, or not at all, “scary,” with timely follow-up care and 24/7 access to online support services
Non-clinical strategies and services	The importance of social support, community building activities (e.g., fun days and community events on campus), green spaces / nature, art therapy, fitness facilities, nutrition, and safe spaces and forums to discuss mental wellness
Workforce diversity and capacity	Sufficient, responsive, culturally, and linguistically capable staff and the desire to build connections with BH professionals who are representative and reflective of the identities they serve
Agency and self-determination	Equipping youth and families to make informed decisions by providing education and access to navigation tools, including trusted places that can provide connections to resources and information about accessing services
Affordability	Access to free or low-cost services and supports in the context of youth financial vulnerability due to frequent changes in their insurance status
Role of families and caregivers	The need to focus on family supports, strengthen intergenerational relationships, and help caregivers with access and system navigation,

CALHHS BEHAVIORAL HEALTH AND TASK FORCE MEETING

Meeting Summary

TUESDAY, SEPTEMBER 13, 2022, 10AM – 3PM

	recognizing that families themselves may be barriers to discussing and seeking mental health resources
Confidence in systems and institutions	Low level of trust as a barrier to accessing services and supports; broader ramifications of systemic racism, poverty, food and housing insecurity

The outcomes goals, below, were developed based on these themes, which speak to both outcomes for the population and measures of system performance. Current work is focused on developing metrics and sources for each of the above outcomes.

- **Population outcomes**
 1. Increase in overall mental well-being for children and youth
 2. Decrease in mental health challenges
 3. Decrease in rates of suicidal ideation for vulnerable populations
 4. Decrease in emergency room visits and hospitalizations for children and youth with mental health related conditions
 5. Decrease in rates of school absenteeism
 6. Decrease in stigmatizing attitudes toward behavioral health
 7. Improvement of experience with BH services and supports for children, youth, and families
- **System performance measures**
 8. Increase in knowledge of available BH supports and services
 9. Increase in children and youth who received mental health and substance use services and supports
 10. Increase in diversity of BH professionals, especially in underserved communities
 11. Increase in preventive services and family supports for children ages 0-5
 12. Increase in substance use prevention strategies specifically for younger children and adolescents
 13. Decrease in barriers to care for children and youth from underserved communities
 14. Increase in cross-sector collaboration and adoption of continuous improvement approaches
 15. Increase in utilization of the school-linked statewide fee schedule

CALHHS BEHAVIORAL HEALTH AND TASK FORCE MEETING

Meeting Summary

TUESDAY, SEPTEMBER 13, 2022, 10AM – 3PM

DISCUSSION

BHTF members shared questions and comments related to development of the CYBHI outcomes goals and measures.

- I appreciate seeing that the CYBHI is including stigma reduction, including within systems, as it can have lasting repercussions for youth. This is an important aspect of prevention and building trust. I look forward to seeing how cultural elements are integrated into this aspect of the work, particularly for communities of color.
- When does the RFP for the independent evaluation close?
 - Ms. Stafford Jones said that the RFP closes on September 30, 2022. The evaluation will address systems change, policy evaluation, and programmatic evaluation. Rather than be conducted as a single evaluation at the end of five years, it will include some metrics to measure shorter-term progress along the way, as well as longer-term metrics.
- I recommend adding reduction in justice system involvement as a population outcome for CYBHI. Is the CYBHI working with justice system partners like the Office of Youth and Community Restoration and probation to ensure that metrics capture and stratify data on justice involved youth?
 - Ms. Stafford Jones said that as metrics and data sources are identified, she would add consideration of the availability of stratified data on justice-impacted youth. The CYBHI is collaborating with partners that work with youth in the foster system to identify opportunities for alignment in terms of shared metrics and tools that can be useful to partners and help improve services. Overall, the CYBHI aims to utilize existing metrics that are already used by the systems that serve youth.
- Do special education students participate in the Healthy Kids Survey?
 - BHTF members Christine Olmstead and Laila Fahimuddin said that students who receive special education services participate in the survey, unless their IEP directs otherwise or their parent/guardian requests that they not participate.
- The outcomes measures should address whole person centered outcomes – the impacts on individuals and their families – whereas those listed were are all utilization-related.
- Make sure that students with autism and developmental disabilities are not missed in the data collection.
- Suspension rates are an important metric, particularly for Black students who are often punished rather than being given care and support, leading to the school-to-prison

CALHHS BEHAVIORAL HEALTH AND TASK FORCE MEETING**Meeting Summary**

TUESDAY, SEPTEMBER 13, 2022, 10AM – 3PM

pipeline. The State already collects data on school climate indicators including suspensions and expulsions. These are important for equity accountability.

- The measures should look at the intersection of school discipline and substance use; some young people receive therapeutic approaches while others are punished.

CYBHI ECOSYSTEM WORKING PAPER

Mike Lombardo, Placer County Office of Education, Ken Berrick, Seneca Family of Agencies, Lishaun Francis, Children Now, and Marni Sandoval, Monterey County Behavioral Health, presented on development of the CYBHI Ecosystem Working Paper. The working paper is focused on how all the puzzle pieces of children and youth behavioral health fit together and how the CYBHI can contribute to a more integrated ecosystem.

The paper is based on feedback from diverse sources, including youth and family input sessions; advisory groups across youth, caregivers, public and state agencies; over 100 expert interviews from a range of perspectives; secondary research and literature; and a thirteen-person writing team with diverse expertise, including the presenters listed above. It aims to begin to answer the question of what will be functionally different in the systems that serve children and youth within this reimaged ecosystem. The paper will help inform how the CYBHI is implemented.

The presenters emphasized that the paper is still in development, with initial findings and ideas that will be further developed into recommendations, and that the objective of sharing the initial findings with the BHTF at this stage is to get feedback on both the needs and solutions.

The paper identifies twelve challenges within four overlaid categories: underserving families, functionally inadequate, structurally siloed, and missing key resources.

Participants used the chat to share questions and comments related to the twelve challenges.

- Insufficient data and information-sharing, ineffective and siloed funding mechanisms, and siloed service delivery and thinking resonate as root causes of many of the other challenges. For example, California doesn't allow for same-day billing for whole-person care (in FQHC's), and has a largely adult-focused, county-driven carve out. This limits accessible care, is parallel with other systems mistrusted, and provides insufficient pay to keep the workforce, let alone culturally competent folks who disproportionately may be single parents or come from communities with less resources.
- Incorporate upstream prevention.

CALHHS BEHAVIORAL HEALTH AND TASK FORCE MEETING

Meeting Summary

TUESDAY, SEPTEMBER 13, 2022, 10AM – 3PM

- Different sectors have different understandings of mental health and how to handle issues related to mental health.
- Look into building out the Memoranda of Understanding under AB 2083 to cover all children and youth, not only those in foster care.
- The challenges have been known for years.
- Lack of specialty care is another challenge.
- Make sure that the paper addresses being inclusive of special populations.
- To address the trust issue, implement strategies to bring trusted community-based organizations/providers into our larger, well-funded systems. They would be instrumental in addressing equity gaps and in return could get access to a more stable funding source.
- Another challenge is the lack of affordable, comprehensive, quality coverage across all payers.
- Nuances related to substance use challenges are missing and will need to be addressed going forward, since it is often a separate system, separate providers, and carries huge stigma of its own.
- Add the early learning sector.
- Ground in the voices of Black children, youth, and practitioners, and include funding to Black-led and -serving organizations.
- Difficulty navigating the system to access care is a key challenge.
- Need more specificity, which will elucidate critical equity issues – for example naming which families are underserved, which communities are disproportionately missing key resources, who is most impacted by the functional inadequacies.
- Inequity should be another overlaid category in which many of the challenges would fit.

The presenters shared three integrated elements for a redefined ecosystem: function, process, and outcomes; structure, organization, and resources; and vision, mindset, and culture.

Additionally, all solutions must be developed with and for youth and families. For each of the elements of emerging solutions, the paper includes multiple components with their respective objectives and functional needs. They noted that this effort is still in progress and high-level, and deeper specificity will be added as it is developed.

Participants used the chat to share questions and comments related to the elements of solutions and shared “bright spots” they have seen in behavioral health for children and youth.

CALHHS BEHAVIORAL HEALTH AND TASK FORCE MEETING**Meeting Summary**

TUESDAY, SEPTEMBER 13, 2022, 10AM – 3PM

- The items in the section on addressing root issues of structural inequities are elemental.
- Empowering communities and families is key to make the system work for children, youth, and families.
- Address payment inequities and dysfunction, which are a root cause and structural inequity.
- Elevate Fetal Alcohol Spectrum Disorder, as it is relevant to many kids dealing with BH needs and involved in the criminal justice system.
- Commitment to addressing structural inequities is critical for upstream prevention.
- Clearly defined roles will enable better collaboration.
- Consider how utilization data can be aligned to elucidate the problems that are not being addressed within the current services and supports from counties and the State.
- Adopt target universalism to address support of specific sub-groups.
- There is already documentation of system failures; use these as “to do lists” with targeted efforts to tackle each one.
- Psychoeducation is needed.
- An integrated approach with alignment across the ecosystem is essential. There are so many potential sources of funding with misalignment of goals and priorities.
- Include primary care providers in the behavioral health workforce, since they see the majority of children and youth with behavioral health concerns.
- Develop and promote models where existing and new classes of providers for Medi-Cal (e.g., BH coach, peer support, CHW, PPS credentialed staff, therapists, etc.) work together. Define the roles and responsibilities and strengths of each contributor.
- In fostering innovation, focus on outcome-driven innovation.
- To develop a culturally diverse workforce, it is critical to think about starting very early in primary/secondary education and think about those supports needed.
- Ensure that BIPOC staff needs are heard and addressed.
- What are the steps to accomplish these goals? Will the Working Paper lay out a work plan?
- Provide pathways for peers for credentialed and non-credentialed roles, including pathways to move up the career ladder for those who want them.
- Innovation to scale requires alternative payment arrangements.
 - Mr. Berrick said that the group is looking at the issue of payment structures, including how payment structures across systems relate to one another.

CALHHS BEHAVIORAL HEALTH AND TASK FORCE MEETING

Meeting Summary

TUESDAY, SEPTEMBER 13, 2022, 10AM – 3PM

- It would be helpful to see how the funding across different state sources come together (CDE, DHCS, HCAI, etc.) beyond the CYBHI.
- Include childcare and early care and educations settings within the integrated approach to child well-being and alignment across the ecosystem. Consider the overlap with Community Schools.
- Dedicated training is needed for culturally and linguistically competent services. Graduate schools are not providing specific training for providing services in languages other than English.
- In-language supervision is needed.
- Include and leverage home visiting, which is a core model of ACEs prevention and parent behavioral health support.
- Build from the MHSOAC's prevention and early intervention work. Their draft report is available at <https://mhsoac.ca.gov/initiatives/prevention-early-intervention/>.
- Community-defined shared outcomes, accountability, and continuous improvement is critical.
- Accountability should include across payers as well.
- Strong coordination is needed between CalHHS and California Department of Education on things like community schools and SBHIP.
- Data and information sharing should define HIE as needed for APMs.
- Consider specifying those most impacted as the communities that need to be empowered with authority to define outcomes.
- Leverage the DHCS Population Health Management service to ensure our most vulnerable children/youth are getting the services they need.
- Effective approaches to funding that maximize impact is critical.
- Coordinated care navigation is critical.
- Payer accountability is needed – transparent accountability of both MHP and MCO contributions to inequities.
- Focus on aligning the level of training needed to deal with which problems. Community health workers can help with many things, while others may need a licensed provider. It is critical that children have access to the whole continuum of care if needed.
- Ensure that providers have child-specific training. Children are not little adults.
- Define sustainable funding – if funding is tied to utilization rather than whole person-centered outcomes, it may ignore or even harm the individuals.

CALHHS BEHAVIORAL HEALTH AND TASK FORCE MEETING

Meeting Summary

TUESDAY, SEPTEMBER 13, 2022, 10AM – 3PM

- Outcomes should be aligned to both physical and behavioral health HEDIS and WPC measures.
- Continue to invest in schools. They can be a key way to reach children and families, support health and wellbeing, and build trust.

DISCUSSION

The presenters posed the following discussion questions related to the Ecosystem Working Paper:

1. We've discussed the ways we've collaborated with children, youth and families in crafting these recommendations. As we work on systems change, what are the most **effective ways you've seen of continuing to center the needs and wants of children, youth and families?**
2. Which of these **solutions resonate with your experiences?** What have you seen **work well, or not as well?**
3. Where do you **see your work intersecting with the emerging recommendations?** What should this work build on?

Participant comments are summarized below.

- The person-centered approach is key.
- Centering individuals, families, and communities is elemental. Authentic stakeholder engagement should be a part of developing this work as well as oversight and accountability related to the implementation and outcomes. Those impacted should be involved in defining benchmarks, what is working, and what needs to be changed as it is implemented.
- Engagement needs to include families that may be juggling many demands, for example working multiple jobs and caring for their children. This is critical to make sure that the solutions are feasible.
- The California Reducing Disparities Project is an important bright spot. There is opportunity to expand and scale this program.
- The content presented is beautiful on paper but is too general. The depth of the need seems separated from what are shallow solutions, and lack of acknowledgement of how systems are creating harm. A deeper acknowledgement of the need is essential in order to ensure that the solutions developed truly address it.

CALHHS BEHAVIORAL HEALTH AND TASK FORCE MEETING

Meeting Summary

TUESDAY, SEPTEMBER 13, 2022, 10AM – 3PM

- The high-level points are ambitious and hard to argue with. The key question is how to get there – how to remove the long-standing barriers and what the roadmap would look like to make these changes. Particularly things like the structure of funding are systemic issues that people have been trying to change for many years but have not yet. The conversation needs to go one step deeper to really address *why* these things have not been able to change yet. Things like political will are important considerations.
- In operationalizing the strategy, ensure that the work does not get built in siloes.
- The success of an ecosystem will depend on a well-organized system of oversight.
- Integration of behavioral health in primary care is working well, with around 80% uptake of behavioral health treatment. It is provided in a trusted place and coordinated within a system.
- Building a network of care means working with community-based organizations and developing an understanding of what each other do and how we can support each other.
- Outcomes need to focus on whole person-centered needs, addressing whether the services, supports, and programs are making a difference for individuals' needs, getting quality help when it is needed.
- It is time to acknowledge and take action on root causes and injustices. We have discussed much of this for too long.
- It would be helpful to see the different funding streams, programs, and systems players.
- Complex problems need complex solutions. Unfortunately, these complex solutions often move into an individualized model of care, which costs a lot of money.
- Create “proofs of concept” focusing on a single problem and contextualizing what cross-system collaboration would look like.
- Including primary care providers is critical to preventing further siloing. They are in the best position to work with families to define what solutions would be and address stigma and other barriers in behavioral health care.
- FQHCs and school-based health centers also have an important role, related to that of primary care providers.
- How will this working paper inform other departments' initiatives, programs, and priorities? It would be helpful to have each department under CalHHS lay out how they will respond to the problems, recommendations, and outcomes identified in the Working Paper.

CALHHS BEHAVIORAL HEALTH AND TASK FORCE MEETING

Meeting Summary

TUESDAY, SEPTEMBER 13, 2022, 10AM – 3PM

- It is important that every actor/system in the ecosystem be able to operate at their highest level within their appropriate abilities. Each player has their own expertise, skillset, and area in which they flourish. While it is important that the system not be disjointed in siloes, it can also be even more difficult to navigate if there are not clear roles. This can also lead to less accountability.
- Triage is important – identify issues to focus on, where there are particular challenges and opportunities for more favorable outcomes.
- Paying for universal care coordination, including with the peer, doula, and Community Health Worker benefits, would help solve many of the challenges highlighted. For this to work, benefits both old and new cannot be as restricted to specific settings.
- Stakeholder engagement must include stakeholders with disabilities and their families, including people with autism and related disorders.
- Transition-Age Youth have specific challenges and needs and should always be considered a sub-population. Dedicated services are needed because of the particularities of this age, including brain development.
- Include “threat assessment” screening, in addition to other screening.

PATH FORWARD

The presenters shared their next steps in developing the Working Paper:

- Incorporate BHTF feedback and feedback from other stakeholder engagement to shape recommendations
- Build working paper draft that includes connections to ongoing work across the state
- Release working paper alongside series of conversations to support dialogue and ignite change

BHTF MEMBERS OPEN DISCUSSION: THE DYNAMIC AND CHANGING BEHAVIORAL HEALTH ENVIRONMENT

BHTF members were given an opportunity to share about work they are doing as it relates to the BHTF and to elevate topics that have not yet been addressed at the BHTF.

- In Governor Newsom’s veto message of SB 57, he noted that there would be some kind of follow-up work done regarding issues around supervised consumption and harm reduction. Is there a plan in the works to carry the conversation forward around addressing the overdose epidemic, including supervised consumption?

CALHHS BEHAVIORAL HEALTH AND TASK FORCE MEETING**Meeting Summary**

TUESDAY, SEPTEMBER 13, 2022, 10AM – 3PM

- Ms. Welch said that the veto message indicated that there would be follow up with local government partners, and that CalHHS is beginning the follow up on this.
- Two themes that emerged in the earlier discussions were making cross-sector connections and the role of community schools. In the spirit of both of these, some important considerations are how do community schools connect with to SBHIP, CYBHI, and CalHHS. It is important to create links between the many funding sources and the spaces where communities connect to the work that is being done, like community schools.
- SAMHSA hosted a National Recovery Summit in August that brought together participants from the substance use and mental health worlds. It would be interesting to hear a report out from the Summit, perhaps at the next BHTF meeting.
- The development of CARE Court created a significant rift in the behavioral health world in California, and even within the BHTF there were some members that worked hard for CARE Court and others that worked hard against it. It is important to create space to process and heal the rift as a community, to the extent possible. We need to make space to talk about how the peer voice was or was not included in development of CARE Court and the implications for other major initiatives from Governor Newsom and Secretary Ghaly. To be functional and effective as a Task Force, we need to talk about this elephant in the room.
- With all the investments in behavioral health, it is important to move beyond expanding existing approaches and making small changes to them. Instead, we need to think through the ways fundamental transformations are needed to serve the people that the programs are meant to serve. This may even mean stopping some current approaches and developing entirely new ones. Assessing whether the State's current programs meet the needs in the field is a critical first step.
- There is an opportunity at this moment around the intersection of education and behavioral health. There is increasing interest and recognition of the need for coordination between the two systems, for example at the county level, supervisors and behavioral health directors working together. For kids that have multiple challenges, coordination between behavioral health and schools is an important opportunity to meet needs.
- As more systematic change is undertaken, it is important to focus on changes that will be meaningful in the long-term.

CALHHS BEHAVIORAL HEALTH AND TASK FORCE MEETING**Meeting Summary**

TUESDAY, SEPTEMBER 13, 2022, 10AM – 3PM

- The U.S. Access Board developed a Diversity, Equity, Inclusion, and Accessibility (DEIA) Strategic Plan; we should build on this work.
- Does the State have guidelines on ketamine treatment and clinics, which are becoming more common around California?
- Governor Newsom recently signed an executive order directing State agencies and departments to take additional actions to embed equity into their missions. A new Racial Equity Commission is also being formed. We should consider how the can BHTF work with the new Commission on issues of mutual importance related to disparities, for example in children’s behavioral health.

NEXT STEPS & CLOSING

Ms. Welch thanked BHTF members and stakeholders for joining the meetings and for sharing their valuable input. She said that, in addition to sharing an update on the Crisis Care Continuum planning effort, the December BHTF meeting would focus on issues related to substance use disorder (SUD), which is a cross-cutting issue among many of the departments under CalHHS with lots of work happening at this time.

CALHHS BEHAVIORAL HEALTH AND TASK FORCE MEETING

Meeting Summary

TUESDAY, SEPTEMBER 13, 2022, 10AM – 3PM

APPENDIX A. BREAKOUT DISCUSSION NOTES

As summarized above, BHTF members and public stakeholders participated in breakout discussions on the State’s Crisis Care Continuum Plan. Groups took notes on their discussions, included below.

BHTF MEMBER BREAKOUT GROUPS

GROUP 1 – CRISIS PREVENTION

1. FUTURE STATE STANDARDS Standards (baseline resources available for all)	2A. CURRENT STATE OF MEETING STANDARDS - Currently AVAILABLE	2B. CURRENT STATE OF MEETING STANDARDS - Currently PLANNING	2C. CURRENT STATE OF MEETING STANDARDS - AIMING FOR	3.A NEEDS What is needed to be able to achieve the standard?	3.B NOTES Additional input or considerations
Access to peer-based warmlines	x		<i>Statewide standards</i>	<i>Need to be more culturally & linguistically competent & accessible</i> <i>Improved outreach to bring in more volunteers with lived experience</i>	<i>Effectiveness should be evaluated</i> <i>Some group members were not aware of existing warm line resources</i> <i>Group identified this standard as a top priority</i>

				<p>phone just the same as physical health data!)</p> <p>How are we including families and peers in discharge planning and plan adherence?</p>	
Linkage to ongoing care			X	<p>Linkage within 24 hours is important, but needs to also include linkage to an ongoing provider that can continue to see them.</p> <p>Who is responsible for the linkage? The facility provider? The health plan? Need an outside case manager</p>	<p>This hand off is especially important for unhoused individuals - where MH needs take a back seat to basic needs (food/shelter, etc.)</p> <p>Linkage isn't a strong enough term. Linkage often means a list of referrals. The goal is that the client experiences a seamless continuity in their discharge, step-</p>

					plans there is little to none, and the public has no idea of the counties' roles in limiting care–service inadequacies need to be published on web-based dashboards so people can advocate for equitable access.
<i>Prevention: CCBHCs</i>			X	Additional state funding and buy-in	Strong connection between 988 and CCBHCs
Integration with other crisis and BH services			X	Remove counties' siloed payments for specific programs and transition to FFS or capitation/PMPM across programs/services. CSU's, residential, and in-home stabilization/wrap-around services	Linkage is too weak a standard for such a fragmented system, and usually leads to referral databases with limited closed-loop tracking and no HIE. We need to catch up to the rest of healthcare and pay for and
