

A Retrospective Examination of Child Protection Involvement among Young Adults Receiving Homeless Services:

Preliminary Findings from Linked HMIS & CWS/CMS Data...

Thanks!

- Funding for this “proof of concept” data linkage and analysis was generously provided by First 5 LA (*data linkage*) and the Conrad N. Hilton Foundation (*analysis focused on TAY*).
- This work was developed in partnership with San Francisco’s Human Services Agency, the California Child Welfare Indicators Project, and the California Department of Social Services.
- The hope is that the coding and these preliminary findings will inform expanded efforts to link these data sources.

Harnessing the scientific potential of linked, administrative data to inform children's programs and policies.

indicators project

Background

- ❖ Growing appreciation of the relationship between childhood experiences, particularly childhood abuse and neglect and foster care placement, and risk of homelessness during young adulthood.
 - ❖ *Homeless adults self-report higher rates of history of maltreatment and foster care placements than the general population (Koegel et al., 1995; Winkleby et al., 1992)*
 - ❖ *Between 11-46% of youth who age out of the foster care system experience homelessness in the years following emancipation (Dworsky & Courtney, 2010; Fowler, Toro & Miles, 2009; White, Gallegos, O'Brien, Weisberg, Pecora, & Medina, 2011; Dworsky, Napolitano, & Courtney, 2013).*
- ❖ Efforts to align services across these two systems has been challenging. Among a range of issues that have hindered the coordination of public programs across sectors, certainly one is the absence of data which would allow for an understanding of when, where, and for whom these cross-system interactions may be most salient.

Objective

- Limited epidemiological data available from which we can ascertain how many clients served by homeless services have a history of child protective service involvement
- These data are needed so that we can:
 1. *Document the cross-system involvement of vulnerable youth in California*
 2. *Monitor trends and evaluate the efficacy of prevention and intervention efforts*
 3. *Develop programs that are responsive to what may be unique service support needs for homeless individuals who have been maltreated or were in foster care*

Data

Statewide
Child
Protection
Records
(CWS/CMS)

reported for
alleged
maltreatment
in California

*abused or
neglected, but
never reported*

*involved with child
protection outside
of California*

18-24yr old
youth receiving
homeless
services in SF
between 2011-
2014

*homeless, but not
receiving services*

*receiving homeless
support services, but
not in SF County*

SF County
Homeless
Service
Records
(HMIS)

Record Extracts

- **CWS/CMS: 1,546,558** maltreatment reports on unique children born between **1989-1996** and reported for maltreatment after **1998**
- **SF HMIS: 3,704** homeless service records involving unique children born between **1989-1996** and with a homeless program service encounter between **2011-2014**

Questions

~~How many children reported for maltreatment and/or in foster care later use homeless services?~~

Statewide / California
Child Welfare Records

How many young adults accessing homeless support services have a history of child protection involvement?

San Francisco
HMIS Records

Preliminary Findings : *Demographics**

- Among 18-24 year old youth receiving homeless services in SF County between 2011-2014...
 - 3,704 young adults served
 - 51% female, 48% male, <1% transgender
 - 41% black, 25% Hispanic, 16% white, 17% other/missing

*DRAFT: Please do not quote or cite without authors' permission

Preliminary Findings: Child Protection History*

Among 18-24 year old youth receiving homeless services in SF County between 2011-2014...

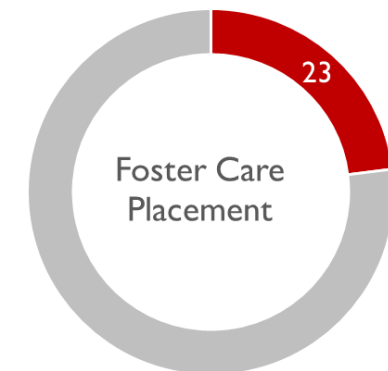

- **55%** (n=1,863) had at least one allegation of childhood maltreatment
- **32%** (n=1,096) had been formally substantiated as a childhood victim of maltreatment
- **23%** (n=773) had spent time in out-of-home foster care

■ reported maltreatment ■ no reports

■ substantiated report ■ no substantiation

■ foster care placement ■ no placement

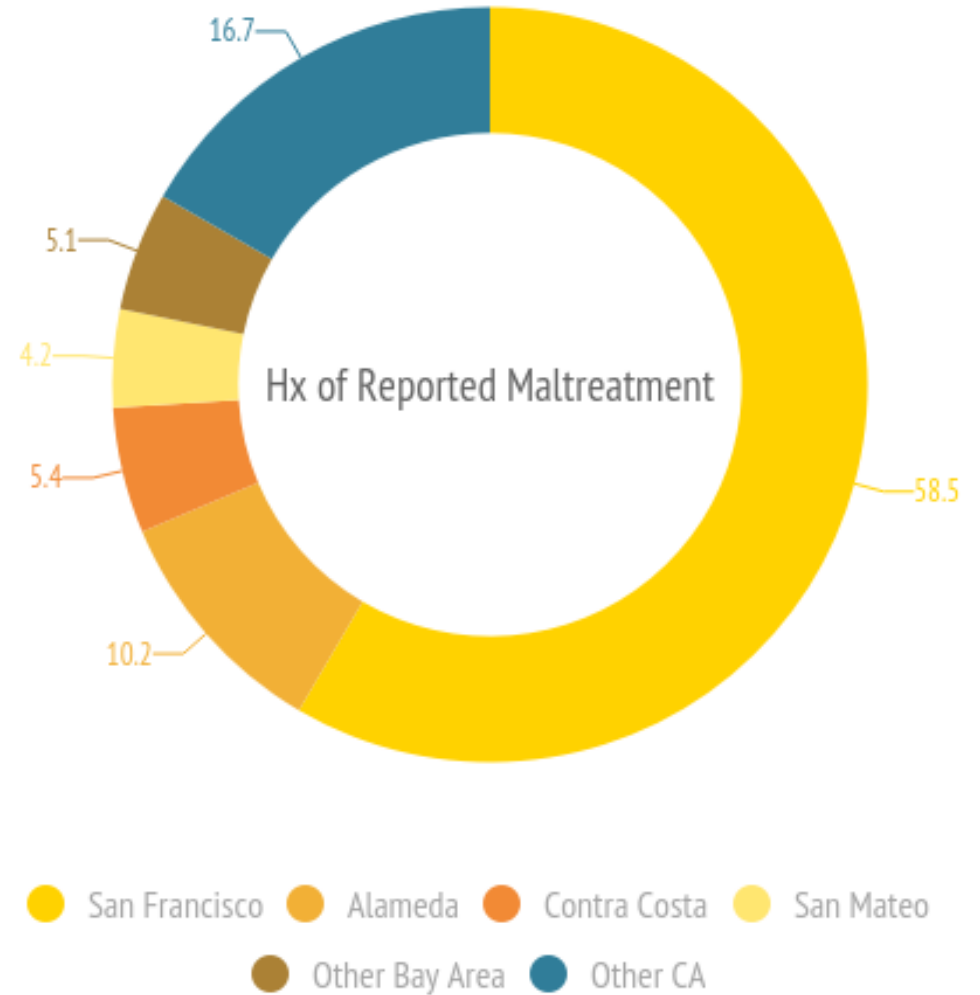

Preliminary Findings: Child Protection History*

- Among 18-24 year old youth receiving homeless services in SF County between 2011-2014...
 - **18%** (n=614) had been reported at least once for alleged sexual abuse
 - **32%** (n=1,087) had been reported at least once for alleged physical abuse
 - **41%** (n=1,387) had been reported at least once for alleged neglect

(children reported for two or more types of maltreatment will appear more than once above)

Preliminary Findings:
*Cross-county data**

Among 18-24 year old youth receiving homeless services in SF County between 2011-2014 who ALSO had a history of reported maltreatment...

Distribution of first reports of maltreatment by county.

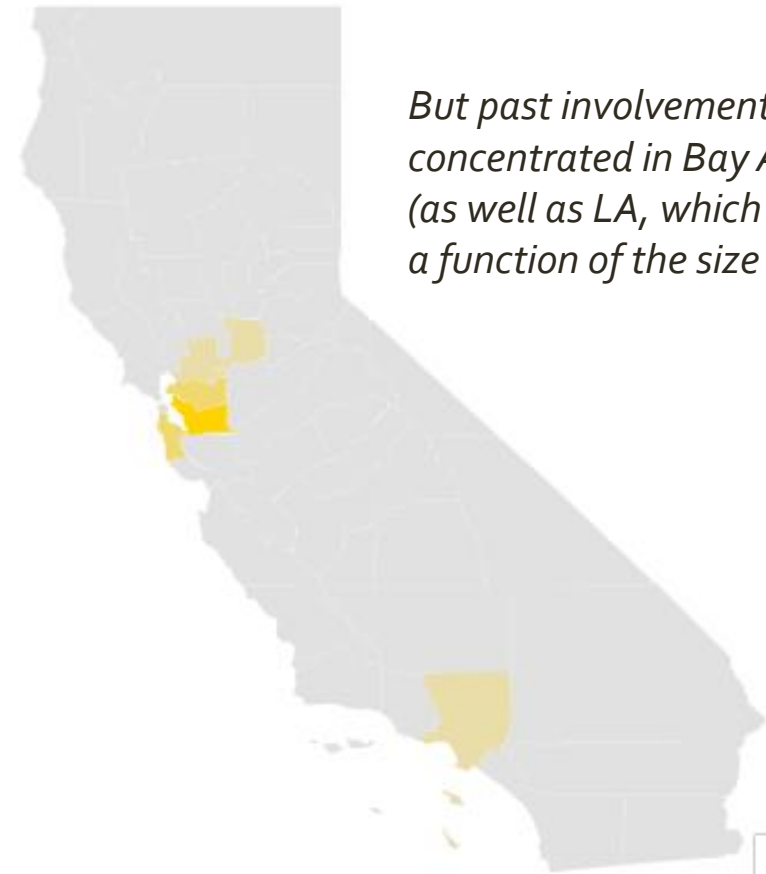

*DRAFT: Please do not quote or cite without authors' permission

18-24 year old young adults receiving homeless services in SF County: History of First Reported Maltreatment by County

The population of young adults served in SF County had earlier CPS involvement in just about every county in the state...

● Bay Area ● Other ● San Francisco

But past involvements were concentrated in Bay Area counties (as well as LA, which may be largely a function of the size of the county)

Preliminary Findings: Foster Care Placements*

- Among 18-24 year old youth receiving homeless services in SF County between 2011-2014 AND who had a foster care history...
 - **33%** (n=249) had a last placement in a group home
 - **31%** (n=242) had a last placement in a non-kin foster home
 - **26%** (n=200) had a last placement with kin

(last known foster care placement type is reported above)

In Preparation...

- Examination of demographic differences among homeless youth based on child protection history
- Examination of differences in the nature of homeless service engagement and program types based on a child protection history
- Examination of out-of-county foster care placements
- Additional geographic examinations of cross-county service patterns
- Inclusion of LA and other Bay Area HMIS data (??)
